

VACUFORCE[®]

the
barracudaTM

**BAG AND SACK LIFTING
VACUUM TECHNOLOGY**

The barracuda has been developed for applications requiring the vacuum handling of bags and sacks such as grain, sugar, flour, pasta and other products where traditional vacuum cups are unable to maintain grip on an unstable load.

A two part assembly with an EPDM rubber seal ensures reliable and consistent maximum lifting force of 300lbs (136kg) @ 24”Hg (80% vacuum).

Manufactured from anodized aluminum as standard but available in various other materials as FDA compliant PTFE, to suit the application.
